LUPAPULA LUNO LULIMO BISIINTSA BIBILI A NI B.

MU BYOSI ILAMO BIREEBO BIBILI

MU SHISINTSA 'A' ROBOLAKHO SIREEBO SITWEELA 1(a) NAMWE (b)

ULINIKHUKHOLA SHISIINTSA 'B'

UKHWI LAMO BIREEBO BITUUMA BIKHUBWILE SI SHIFUKIRISIBWA TA.

## SHISIINTSA ‘A’

1. Robolakho sireebo sitweela (a) namwe (b)
  - a) Umurangilisi uwebyekhusoma namwe uwebyebulekeli mwiilekele lyenywe, warusiwilekho umukelema weewe, umurangirisi welileekelo wakhulondele iwe nga uli umurangilisi uwe balekeli khurangilila mu khuwelekhela.

### ***Kumulimo***

Kumisa banamasika

Namwe

- b) Kuuka Manana wayila bakelema bakali mungo mwewe nga aba ni byesi awandalasa ari bakuukhu bano wabalindile bulayi nga mbawo kamaya ta. Nawe wayila bakelema bakali.

### **Kumulimo:**

Usembakana ni Kuuka Manana namwe ta. Rona mulomo 350 – 400 nga uwayo intsambasa.

## SHISINTSA B

Khuyuusa luloomo

2. Soma burone bukuwelebwile ubuyuuse khukhwama mulusamba metsi uburone mu Lumasaaba.

### **INNOVATION:**

The farm has a milling machine that they use to milk the cows. Lugolobi acquired it through a Dutch company in order to improve sanitation of the milk.

“There is little chance of the milk getting contaminated because we do not touch the cows with our hands during milling” he says.

Lugolobi bought the unit of about shs. 10m. he adds that using the machine ensures that the cows are effectively milked.

For bio- security, he has a drive through dip at the main gate to the farm, in addition to foot step in disinfecting pits. The dip at the gate can disinfect both small and large vehicles leading to accidents which can destroy houses, crops and above all loss of lives and expenses are incurred by the government hence leading to low savings in the country.
